
WORKING PAPER 2 · PERCEIVING

PERSPECTIVE BEFORE DATA

How the organizational world model becomes explicit — and why a model hands back the manner of disclosure.

NOT WHAT. BUT HOW.

Pae makes a claim that runs against the mainstream of the active-inference debate: **scaling is not enough**. A structural condition is missing — perspective, defined as

"how a world is given, not what is inferred".

Four features make it up: global, pre-reflective, consequential, persistent. Decisive is the **asymmetric coupling** — perspective shapes inference but is not updated by it.

Pae, H. (2026): Perspective as a missing structural condition for subjectivity in active inference systems. AGI 2026, Part II, LNCS 16855, pp. 137–143. Springer.

A NEAR MISS. LOOKS LIKE A WILD ONE.

In hyperdimensional encoding, numbers are split into levels, each assigned a randomly generated vector. But random vectors are all **equally dissimilar** — the information about closeness is destroyed.

"The core sub-symbolic property of numbers — their closeness — is destroyed."

The model can no longer sense magnitude. The correction yields roughly six per cent more accuracy across five datasets — most strongly where magnitude matters most.

Antona, H., Ibias, A. & Otero, B. (2026): Generating semantic vectors for numeric values in hyperdimensional computing. AGI 2026, Part I, LNCS 16854, pp. 17–30. Springer.

THE SENTENCE NO SYSTEM CAN SAY.

Current approaches force every input into some region — regardless of whether it is actually similar to what lives there.

Unsupervised Cognition refuses instead: if no learned representation is similar enough, the Nodule **returns no Projection rather than hallucinating a label** — a rare property for an unsupervised learner.

The sentence behind it: **"I do not know."** Every reporting system ought to be capable of it. Almost none is.

Ibias, A., Antona, H., Ramirez-Miranda, G., Guinovart, E. & Alarcón, E. (2026): Unsupervised Cognition. Conference poster, 19th Conference on Artificial General Intelligence (AGI-26), San Francisco State University, 27–30 July 2026. Poster documented first-hand; proceedings entry pending. arXiv:2409.18624.

SAME VOLUME. TWO WORLDS.

One encounters it as sufficient, the other as lacking.
Not different beliefs about volume — **different modes
in which the same situation is given.**

The same with twelve per cent market share: one
reads, we hold twelve. The other reads, we are
missing eighty-eight. Same number, same precision,
incompatible consequences — and **neither of them is
wrong.**

THE SAME MEETING, AGAIN

THEY DISCUSS
THE FIGURE.
THE FIGHT IS
OVER THE **MODE.**

Sales sees an opportunity, controlling a risk, operations an imposition. Because the mode is not on the agenda, the meeting ends in compromises about measures.

Until the next meeting. A different figure, the same argument — **without anyone noticing that it is the same one.**

Place a model on that material and it does not learn the organization's truth. It learns its manner of disclosure — and **returns it with higher confidence.**

FIVE FIELDS.

01

The figure — which quantity, which period, which boundary?

02

The mode — **holding or gap?** Everyone for themselves, in writing

03

The codebook — what counts as simple, urgent, unrealistic — and since when?

04

The resolution — do we see a near miss versus a wide one?

05

Abstention — is "we don't know" an admissible answer?

In writing, before measure planning, no longer than one page. Field 2 is the decisive and the most uncomfortable: it makes visible that the dispute was never about the figure.

THE ENCODING DECIDES WHAT YOU CAN PERCEIVE.

For as long as the mode is not on the agenda, the organization negotiates measures and leaves its **perception unchanged**.

In LEAD21 the Circle of Clarity covers "The figure": terms, boundaries, in- and out-of-scope are set down in writing before measures are planned. The codebook is partly covered by The Strategy — premises yes, evaluative standards not explicitly.

Two fields have no instrument: resolution and abstention. Both are gaps that the finding from San Francisco made visible in the first place.

DO THIS TOMORROW

Put the codebook on the agenda – and allow “I do not know” as an answer in reports.
